*Dystocia*

Lec/ 14

Maternity and Obstetric Nursing Lec : 14Ph.D. Pediatric Nsg. د. عدي الفرطوس (odayalfartosy@yahoo.com)Maternity and Obstetric NursingLec: 14Dr. oday alfartosyDystociaDystocia means difficulty during labor.Causes

- *Uterine factors*
- *Fetal factors*
- *Pelvic passage factors*
- *Other factors* that can lead to cephalopelvic disproportion are [kyphosis](#) and rickets.

Types of dystocia

- 1- Cervical dystocia
- 2- Shoulder dystocia

ComplicationOn mother: 1- PPH. 2- Vaginal and cervical laceration. 3- Infection.On fetal : 1- Nerve injury. 2- Fracture clavicle and humerus. 3- Birth asphyxia.Treatment

- 1- Cesarean section or vacuum extraction with possible surgical opening of the symphysis pubis.
- 2- Keeping the women hydrated and antibiotics if the membranes have been ruptured for more than 18 hours.

Nursing Intervention:

- Assess and monitor fetal heart rate and fetal distress
- Monitor maternal temperature and heart rate
- Monitor uterine contraction
- Assist with pelvic examination, ultrasound or other procedures
- Administer antibiotic and IV fluid as prescribed
- Monitor intake and output
- Assess for dehydration
- Monitor color of amniotic fluid
- Teach mother in breathing and relaxing techniques
- Provide good rest and comforts
- Assess for prolapse of the cord
